

Over 200 scientists and physicians worldwide who have researched the biological and health effects of radio-frequency radiation have signed the 5G appeal, calling for a moratorium on the use of 5G technology. The radiation from small cells is not small: Wireless antennas emit microwaves — non-ionizing radiofrequency radiation — and essentially function as cell towers. Here are some reasons why **the roll-out of 5G should be halted:**

1. **HEALTH** Independent science shows the type of radiation emitted by 5G and wireless technologies is capable of harming our health. Cumulative daily radiation exposure poses serious public health risks: Published science indicates that exposures to wireless radiation can increase cancer risk, alter brain development and damage sperm. Children are more vulnerable to these harmful effects and wireless technology has never been tested for long-term safety.
2. **ENVIRONMENT** 5G poses a threat to our wildlife, particularly bees, butterflies and other pollinators, and threaten biodiversity
3. **ENERGY** Wireless radiation consumes mega amounts more energy than do wired options of communication.

Fiber is the safer alternative: Worldwide, many regions are investing in wired fiberoptic connections which are safer, faster, more reliable, provide greater capacity, and are more cyber-secure.
